SafeKey Wallet Information & Instructions

What is a SafeKey? - A SafeKey is a digital verification issued for access to large group activities or services that have been restricted due to the COVID-19 pandemic.

What is SafeKey Wallet? - SafeKey Wallet is a Progressive Web App that allows you to scan or add your SafeKey documents to your own digital wallet. Once saved, it can be accessed and presented to services and activities participating in the SafeKey programme. **SafeKey wallet does not upload your SafeKey anywhere online**; your SafeKey is saved only to your device.

Why use SafeKey Wallet? - SafeKey Wallet is a more convenient way of storing and accessing your SafeKey than other means. Rather than printing out your SafeKey or searching through your phone to find it; you can instead save it once to your SafeKey Wallet and access it quickly and easily from the app.

How do I go to SafeKey Wallet? - SafeKey Wallet is available at https://safekeywallet.gov.bm.

How do I install SafeKey Wallet? -   Using SafeKey Wallet from the website will only work with an internet connection. However, installing it allows you to use it regardless of your internet connection, just as you can with a regular app. To install it visit https://safekeywallet.gov.bm, where your web browser may prompt you to install it. If you don't see a prompt, you can open your web browsers menu and click the option that adds it to your home screen. Once installed, Your browser will install SafeKey Wallet to your device's home screen, where you can open and use it without an Internet connection.

How do I use SafeKey Wallet? Two weeks after receiving your approved course of vaccinations, you will receive an email from Bermuda COVID Vaccine with a link to download your SafeKey and Vaccination Certificate. Download both, then open SafeKey Wallet. On the home screen, you will see two options, **Scan** and **Upload**.

- **Scan**

  Choosing the scan option will open the app's QR Reader, which uses your device's camera.

Align your SafeKey document in front of your camera's preview, having the QR code within the red square.

Keep your camera steady, and within a couple of seconds, the reader will scan and save your SafeKey to your wallet. If you would like to add another, click either the **blue camera button** or the **blue image upload button** located on the bottom right of your screen.

- **Upload**

  Choosing the Upload option will take you to a new page with two options. First, your SafeKey needs to be converted to an Image so that SafeKey Wallet can read it correctly.

  Click **Open Converter**. This button will open the PDF-to-Image converter.

  Click the **Select PDF** button and select your SafeKey PDF Document.

  Download the Image, then click **Choose another PDF.** Finally, select your Vaccine Certificate Document, download it then return to the SafeKey Wallet Upload screen.

  Click **Select image** and choose the image you downloaded. Your SafeKey will now be saved to your wallet, where you can access it later and present it. If you would like to add another, click either the **blue camera button** or the **blue image upload button** located on the bottom right of your screen.

On your new home screen, it will show coloured tiles of the SafeKey documents you scanned. Revisiting the app or website will present you with this page every time; unless you delete your SafeKey's.

Clicking on a coloured tile will take you to the user notice screen, which explains the personal information embedded inside your SafeKey QR code, (i.e. Initials, Date of Birth, and Expiry). Clicking the continue button from this screen will take you to your SafeKey QR Code. You can then present this to a verifier at an activity or establishment participating in the SafeKey programme, verifying your vaccination status.
